

Aesium (AES)

Introduction

Aesium (AES) is a fully community-driven digital asset, also defined as "**DA**" (**Decentralized Aesium**), engineered to establish long-term value through a rigorous scarcity-based economic model. Built on the **Solana blockchain** with a fixed supply of **25 million AES**, the project is designed to eliminate centralized friction and empower its users. We are building a future where finance is governed by the collective, not by corporate entities.

AES transcends the concept of mere scarcity; it represents a standard of sustainable value anchored in community trust. Leveraging Solana's unparalleled speed and scalability, Aesium provides lightning-fast microtransactions with negligible fees, making decentralized finance accessible and efficient for everyone.

Information

- **Name:** Aesium
- **Symbol:** AES
- **Max.Supply:** 25,000,000
- **Distribution:** 100% Community
- **Blockchain:** Solana
- **Launch Date:** 2025
- **Website :** aesium.org
- **Image :** aesium.org/image/AES.png
- **Burn Program :** aesium.org/burn_program.pdf
- **Contract Address :** CjPHgmCL8dYXiah7zHvoHBbDCFuzX6CF7B4vcWAZJAhh

Distribution Strategy

The total supply of AES is dedicated entirely to the public. To ensure maximum fairness and decentralization, there are **no allocations** reserved for developers, partners, private investors, or advisors. This "Zero-Team-Tax" model guarantees that Aesium belongs 100% to its community from the very first block.

Decentralization & Security

Security is rooted in the absence of central control. Upon deployment, the **ownership of the AES smart contract will be permanently renounced**. This action eliminates the possibility of any centralized interference, minting additional tokens, or modifying the core logic.

As a result, Aesium remains:

- **Fully Trustless:** No need to trust a middleman or developer.
- **Immutable:** The rules are set in stone on the blockchain.
- **Holder-Governed:** Power lies solely in the hands of the AES community.

Deflationary Mechanism & Burn Schedule

To ensure sustained scarcity and incentivize long-term participation, Aesium (AES) implements a programmatic burn schedule spanning two decades. This deflationary model systematically reduces the circulating supply, directly rewarding holders by increasing the relative value of each remaining token.

The Burn Timeline (2027 – 2045) A predetermined amount of AES will be permanently removed from the supply every two years. This process is fully transparent and can be verified through the

[burn_program.pdf](#) documentation.

Year	Amount Burned	Supply Reduction (%)	Remaining Supply
2027	2,000,000 AES	8.00%	23,000,000 AES
2029	1,500,000 AES	6.00%	21,500,000 AES
2031	1,000,000 AES	4.00%	20,500,000 AES
2033	500,000 AES	2.00%	20,000,000 AES
2035	250,000 AES	1.00%	19,750,000 AES
2037	250,000 AES	1.00%	19,500,000 AES
2039	200,000 AES	0.80%	19,300,000 AES
2041	150,000 AES	0.60%	19,150,000 AES
2043	100,000 AES	0.40%	19,050,000 AES
2045	50,000 AES	0.20%	19,000,000 AES

Vision Statement

AES is more than a token — it is a declaration of financial independence. We envision a future where value is not granted by centralized authorities, but owned, created, and governed by the people. Aesium stands as a pillar for a decentralized era where the community replaces corporations, and transparency replaces hidden agendas. Our mission is to return the power of finance to its rightful owners: **The Users.**

Conclusion

Aesium is built on the unwavering pillars of **fairness, transparency, and absolute decentralization.** By ensuring that 100% of the supply is held by the public with no central authority, Aesium is uniquely positioned to evolve into a resilient, community-backed asset for the long term.

More than just a financial tool, Aesium is a movement that weaves financial freedom into the very DNA of decentralization. With a fixed supply of 25 million AES, a programmatic burn schedule, and zero team control, AES is not merely a token—it is an **anti-fragile store of value** designed to survive and thrive.

Your vision. Your future. Your Aesium. Your rules.

Future Roadmap

The only roadmap is the collective will of the community. Aesium intentionally rejects a predefined, static roadmap. Instead, we embrace a dynamic evolution where every significant decision regarding the future direction of AES—from ecosystem integrations to strategic pivots—is made by the community through decentralized governance mechanisms.

In the Aesium ecosystem, the holders are not just spectators; they are the architects. The path forward is unwritten, to be defined by those who believe in financial sovereignty.

Legal Disclaimer

⚠ NOTICE: This document is for informational purposes only and does not constitute investment advice, financial advice, or a guarantee of future performance. **Aesium (AES)** is a fully decentralized digital asset with no central team, corporate entity, or legal partnership behind it.

Cryptocurrency investments carry high risk. Since the smart contract is renounced and 100% of the supply is public, participants are solely responsible for their interactions with the asset. Always perform your own due diligence (DYOR) before participating in any decentralized movement.
